Deutsches Forschungszentrum
für Künstliche Intelligenz
German Research Center for Artificial Intelligence

Reference: 11326-2026

Researcher (m/w/d/x) Edge-Cloud AI-Plattform for the Cottbus Project Office

Area: Science
Department: Intelligent Networks
Location: Kaiserslautern
Employment Category: Full time
Type of Contract: Temporary
Term (months): 24

The research department of Intelligent Networks headed by Prof. Dr.-Ing. Hans Dieter Schotten works on innovative concepts for the development and implementation of particularly sophisticated and future-proof communication, AI, but also security and resilience solutions, especially technologies for mobile communications 5G/6G, industrial communication and programmable infrastructures. Application fields for these technologies are diverse and include e.g. industry, robotics, autonomous driving, agriculture, construction site, medical technology and much more.

To stock up our team for "Communication and Sensing" in the research department of Intelligent Networks in Kaiserslautern site, we are looking for several Researchers (m/f/d/x) (full-time, temporary)

Your tasks

- Collaborate on research or industry projects, e.g., to develop 6G communication technologies, novel localization methods, or similar communication and AI projects

- Content work includes one or more of the following topics:
  - Architecture and system design with a focus on sustainability and application-specific requirements and the role of humans
  - Development of novel network solutions for nomadic, infrastructure-less, embedded and organic networks
  - Intelligent and programmable network technologies (i.e. SDN, TSN)
  - Implementation and integration of 26GHz and 140GHz 6G radio access networks and associated radio protocols for communication and sensing functionalities (JCAS - Joint Communication and Sensing).
  - Elaboration and implementation of AI-based management concepts for optimization of communication networks with context management or networked AI
  - Multi-Party AI in 6G networks
  - Security and resilience-by-design to secure communication and AI in the network
  - Design and programming of core network functions for organic networking and mobile backhaul technologies
  - Building first 6G demonstrators based on future-proof applications from industry, logistics, agriculture and medicine (including digital twins)
  - Distributed Ledger Technologies (DLT), Blockchain, Smart Contracts
  - Spectrum utilization concepts
  - Measurements technologies

- Scientific publishing at conferences
- Presentation of research results at regular project meetings or trade fairs

- Supervision of student theses and mentoring of new employees
- Collaboration in acquisition activities
- Assumption of project leadership or management tasks

Your qualifications

- Bachelor's or Master's degree or PhD in computer science, electrical/information technology, industrial engineering (or comparable)
- Good knowledge of German and very good knowledge of English, both written and spoken
- Good knowledge in one or more of the following areas:
  - Communications engineering
  - Hardware, networks and radio communication
  - Artificial intelligence and machine learning
  - Security or resilience for hardware or software structures
- Software development with programming skills in C, C++ and/or Python
- Initiative, communication and teamwork skills, presentation skills
- Goal-oriented and independent way of working
- Strong communication and persuasion skills
- Willingness to travel on business

Your benefits

- Involvement in interdisciplinary and pioneering research topics
- Excellent industry contacts
- Excellent facilities with state-of-the-art working tools and environments such as high-performance computing clusters, 5G campus networks, 6G development networks and industrial robotics and vehicle technology
- An innovative, agile and professional work environment at the pulse of technology development
- The opportunity to develop innovative scientific ideas and test them in real-world applications
- A long-term job in a rapidly developing technology region in the beautiful southwest of Germany
- Personal development opportunities to become a technological expert or in the field of project management
- The possibility of a doctorate or post-doctorate in cooperation with the Technical University of Kaiserslautern.

We are looking forward to receiving your application documents including your earliest possible starting date.

The German Research Center for Artificial Intelligence (DFKI) has operated as a non-profit, Public-Private-Partnership (PPP) since 1988. DFKI combines scientific excellence and commercially-oriented value creation with social awareness and is recognized as a major "Center of Excellence" by the international scientific community. In the field of artificial intelligence, DFKI has focused on the goal of human-centric AI for more than 35 years. Research is committed to essential, future-oriented areas of application and socially relevant topics.

DFKI encourages applications from people with disability; DFKI intends to increase the proportion of female employees in the field of science and encourages women to apply for this position.

Deadline for applications:
5. April 2026

Please feel free to contact us if you have any questions regarding this position:
